Oracle Health 2025

How Are Customers Faring Three Years Post-Acquisition?

Oracle Health 2025

How Are Customers Faring Three Years Post-Acquisition?

It has been three years since Oracle finalized their acquisition of Cerner—here is what has happened since then:

- Oracle Health has made big promises but has not enhanced the customer experience.
- Customers report that communication has been lacking and that the vendor partnership has declined.
- Several large, well-known customers have left Oracle Health.
- Clinical AI Agent has caught customers' attention as the first among recently promised enhancement to be delivered.
- Customers still have lingering questions about Oracle Health's road map.

This report dives further into the above and other findings to shine a light on the current Oracle Health customer experience.

Report Methodology

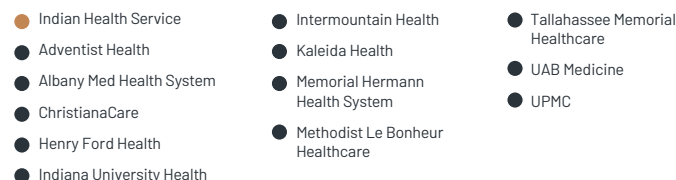

Data for this report comes from three places: (1) KLAS' standard quantitative evaluation, (2) market share data, and (3) a longitudinal feedback group of Oracle Health customers. Regarding the latter, customers volunteered to join the feedback group and range from large health systems to community facilities. Since 2022, the feedback group has been interviewed by KLAS seven times. For more information, see the [About This Report section](#).

Oracle Health Has Lost a Substantial Number of Customers Post-Acquisition

Since 2022, Oracle Health's market share has substantially declined, especially with large health systems—KLAS data shows that **the vendor has lost 57 unique acute care customers in the past three years**, 12 of which are health systems with over 1,000 beds. (For more information on Oracle Health's current market share, see [this year's US Acute Care EHR Market Share report](#).)

Oracle Health Wins & Losses, 2022–2024—Large Health Systems

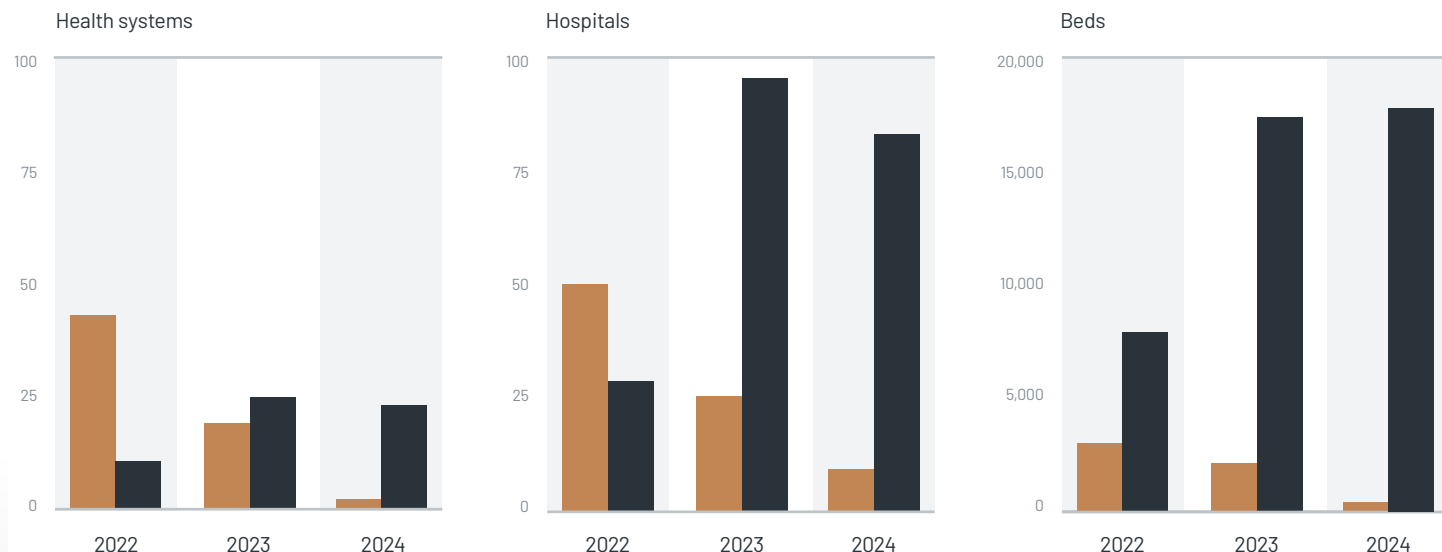

US health systems with 1,000+ beds only

Oracle Health Wins & Losses, 2022–2024

Data comes from KLAS US Acute Care EHR Market Share reports

Legend: Wins (Orange), Losses (Black)

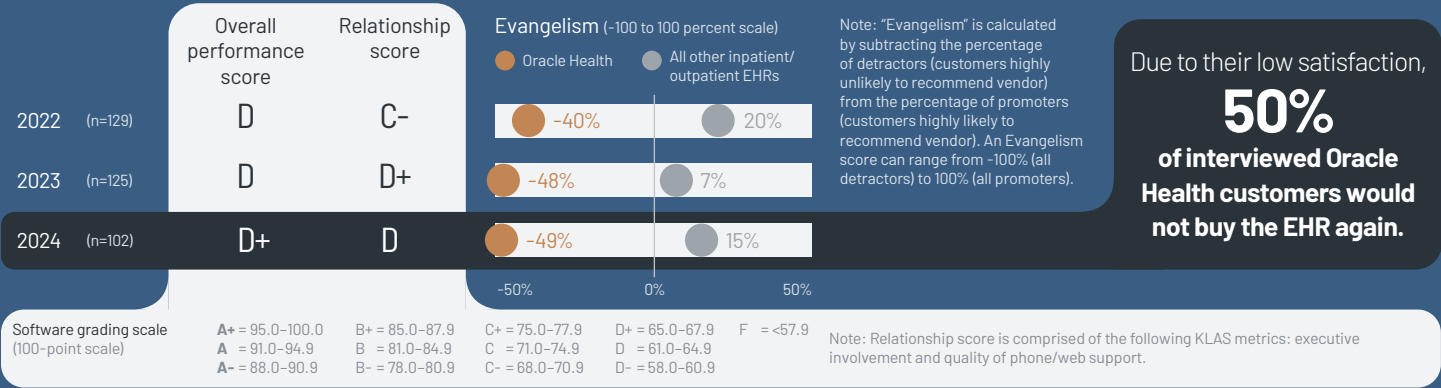

Wins have decreased as losses have increased—especially for hospital & bed counts.

Customers Still Waiting for “Endless Possibilities” Promised by Oracle Health

When Oracle acquired Cerner, they inherited a dissatisfied customer base, and post-acquisition, customer satisfaction has not improved. Interviewed Oracle Health customers report their relationship with the vendor has declined, citing insufficient industry knowledge due to layoffs, a lack of clear communication, undelivered promises, and an increased focus on collections. Additionally, since 2022, more and more participants in the longitudinal feedback group say they don’t see Oracle Health as a long-term partner.

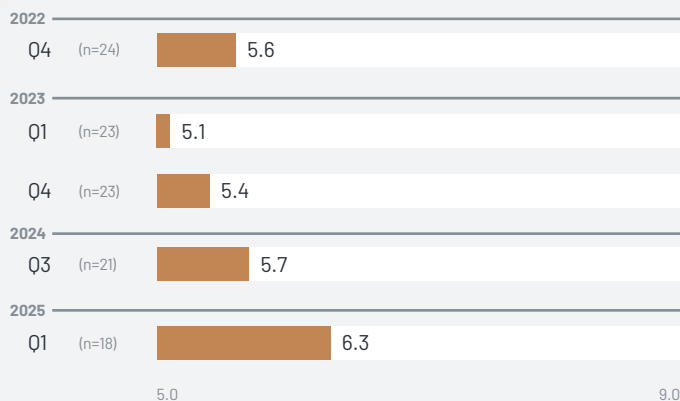

Key Satisfaction Metrics

All KLAS-interviewed Millennium PowerChart customers, not just those who participated in the longitudinal feedback group

Confidence in Oracle Health's Vision for the Future

Longitudinal feedback group only (1-9 scale)

"The vision is a good one. If it were simply Cerner from Kansas City saying what they articulated as a vision, we might question whether they could do it. But Oracle Health is a technology and data company that is moving into healthcare, so **their plan to essentially rebuild the EHR from the ground up using more cloud-based technology is very practical.**" —CMIO

"My team is very positive about the enhancements that Oracle Health is making to the provider portal and about the overall execution of the initiatives the vendor has going on." —Director

"We still have to do code upgrades, and the code is a bit better. It seems like **it has been more rigorously tested.** With our last upgrade, we still had issues, but the issues were not related to the quality of the code." —CMIO

"I am optimistic. I see Oracle Health as a strong long-term partner. A year ago, I would have said that I was upset with the lack of communication. Now, when I talk about the future, I see a high-quality EHR with a strong technology backbone in the cloud. I see where Oracle Health is going with development. . . . They have about 6-12 months to really show that they are going to keep on that pace." —CMIO

Oracle Health's New & Updated Offerings Are Gaining Customers' Attention; Adoption & Understanding Are Still Developing

The following sections share the longitudinal feedback group's early thoughts and adoption plans for six new or updated offerings from Oracle Health. Note that with most of these solutions, customers are in early stages of adoption, and KLAS is not actively measuring all of them. Out of the six solutions, only Clinical AI Agent has enough customer feedback for performance data to be shared.

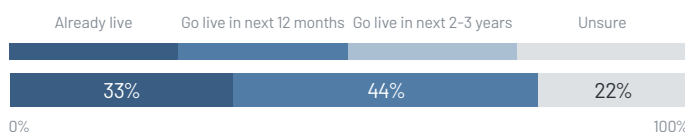

Clinical AI Agent

Overall satisfaction (1-9 scale)

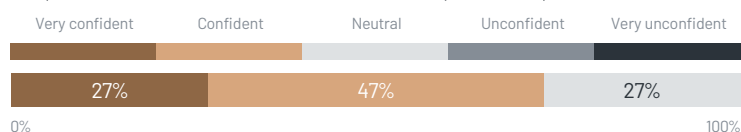

*Limited data

Respondent adoption plans (n=18)

Respondent confidence that solution will have a positive impact (n=15)

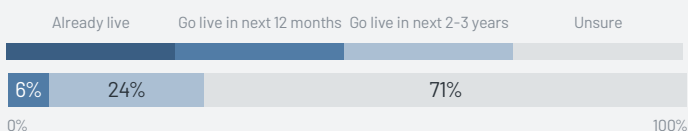

Note: Due to rounding, percentages do not add to 100%.

Nearly all respondents live with Oracle Health's Clinical AI Agent are highly satisfied with the solution, describing it as meaningful technology that is applicable across clinical settings. These early adopters highlight its potential to streamline workflows and provide relevant real-time insights, and several are excited to expand their use of the solution. KLAS plans to publish a report sharing early customer feedback later in 2025.

"The physicians have had a great response to Clinical AI Agent because they spend less time documenting things. . . . They have been complimentary about the solution's quality of work and its transcriptions and prompts, and they appreciate the time that it gives them back. The latest numbers are that the physicians are seeing two additional patients a day. The system has had the impact we were looking for." —CIO

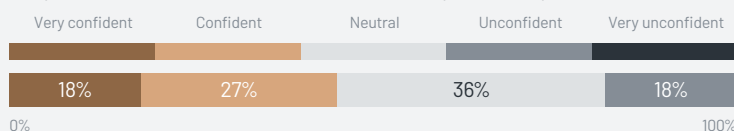

Updated EHR

Respondent adoption plans (n=17)

Note: Due to rounding, percentages do not add to 100%.

Respondent confidence that solution will have a positive impact (n=11)

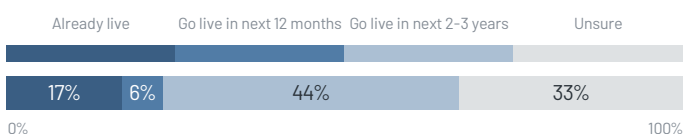

At the beginning of 2025, David Feinberg (Oracle Health's CEO) stated the updated EHR was generally available (GA) to customers and in use by nurses and physicians. In August 2025, Oracle Health publicly announced that the EHR is GA. KLAS has validated a few sites who beta tested the EHR; Oracle Health has not released the names of the beta testers for KLAS to interview. Some survey participants say they are excited about the updated EHR and are exploring implementation. Even so, most respondents feel there is a lack of visibility into the updated software. One respondent noted that the solution doesn't seem like a new EHR but rather a "reskinning" of the current technology.

“We are unsure about the new EHR piece. . . . Oracle Health still can't paint a good picture of what this solution is.” —CIO

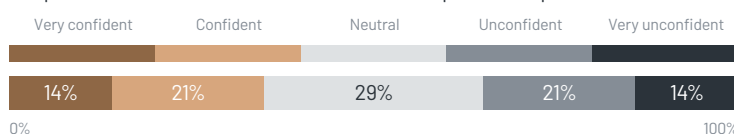

Patient Accounting (RevElate)

Respondent adoption plans (n=18)

Note: Oracle Health did not share a list of Patient Accounting (RevElate) clients with KLAS.

Respondent confidence that solution will have a positive impact (n=14)

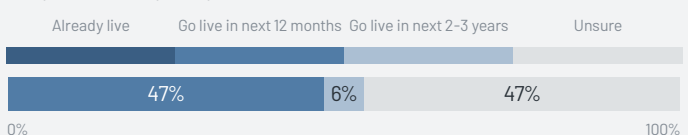

Note: Due to rounding, percentages do not add to 100%.

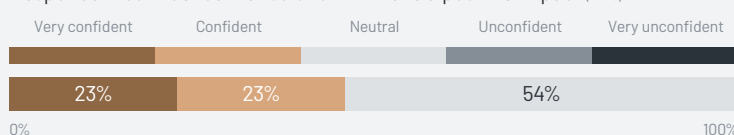

Intended as a solution to customers' longstanding patient accounting challenges, RevElate (now branded as Oracle Health Patient Accounting) was announced in 2021. In the four years since that announcement, a handful of customers have gone live with RevElate, and those that participate in the longitudinal feedback group report varying degrees of success. Group participants who haven't adopted the solution also report mixed feelings: some are eager to adopt it, while others are hesitant due to prior challenges with Cerner Patient Accounting. Overall, customers want proof that the new tool will meet their expectations and that Oracle Health will help them be successful with the solution. KLAS plans to publish a report sharing early customer feedback in 2026.

Updated Patient Portal

Respondent adoption plans (n=17)

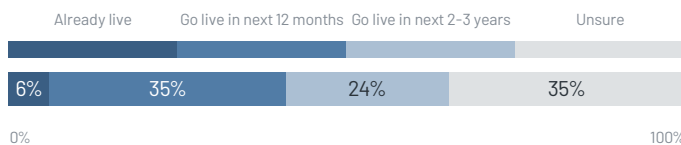

Respondent confidence that solution will have a positive impact (n=13)

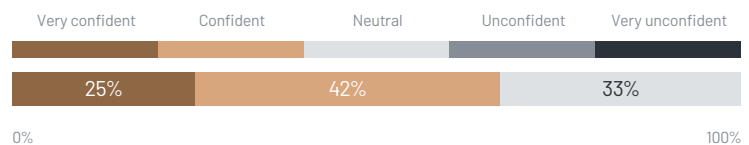

Most participants don't know or hear much about the updated patient portal and the features it will include, but the same respondents feel cautiously optimistic about it. Excitement is largely centered around the integration of AI and an updated user experience respondents feel will be more comparable to that of other patient portals.

Oracle Cloud Infrastructure (OCI)

Respondent adoption plans (n=17)

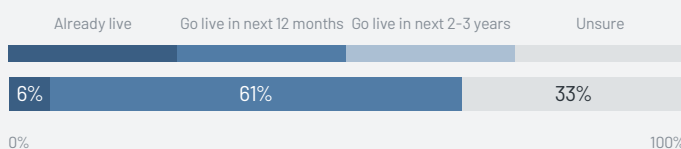

Respondent confidence that solution will have a positive impact (n=12)

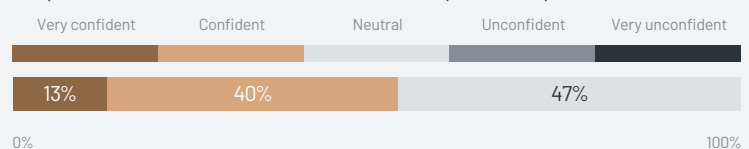

The move to OCI is seen as table stakes by most participants, as it is required for some of the new functionality Oracle Health is delivering. Respondents aren't necessarily working toward OCI but say the move will be a natural process, and they anticipate that the cloud infrastructure will improve reliability, increase security, and resolve performance issues.

Seamless Exchange

Respondent adoption plans (n=18)

Respondent confidence that solution will have a positive impact (n=15)

Oracle Health announced Seamless Exchange in April 2023. To date, a few organizations are live (including one participant in the longitudinal feedback group). Most participants anticipate adopting Seamless Exchange, and all feel either optimistic or neutral about its potential to have a positive impact. KLAS is currently collecting feedback on Seamless Exchange and plans to publish a report sharing early customer experiences later in 2025.

What Questions Do Oracle Health Customers Still Have?

The following questions were gleaned from broader KLAS-collected feedback from Oracle Health customers and reflect concerns that remain on their minds. Oracle Health's response to these questions will be key as they work to regain customer confidence.

When will Oracle Health integrate all their solutions so that they work seamlessly together?

"There is no real connection between the Oracle ERP team and the Cerner folks, and we need an Oracle Health person that can bridge all the gaps. Our Cerner person tries to do that, but they have no real weight on the Oracle ERP side. Right now, we are having to work out the connection between Fusion and Cerner Millennium to be able to do item masters. . . . Oracle Health should be doing this with us because they are going to do this everywhere." —CIO

Can Oracle Health reliably deliver on their promised priorities without disrupting current stability?

"[Oracle Health] needs to deliver on four priorities. One is revenue cycle feature and functions. Second is a revised, modern consumer experience for our patients and their family members as they engage with us digitally. Third, we need to see [the vendor] continue to invest in the core components of the EHR to modernize that. It has been years since they have fundamentally changed that. . . . Fourth, they need to not screw up the move to OCI. We have a very large, stable Cerner footprint and they don't need to screw it up." —CIO

Will Oracle Health's focus on government work come at the expense of commercial healthcare clients?

"For a long time, the vendor lost their way. We felt that they had basically tripled down on the federal business and left everyone else to their own devices. A lot of clients migrated over to Epic to gain ease of use and a more customer-centric system."
—VP/other executive

Can Oracle Health elevate their partnership skills to match their technology prowess and consistently drive customer success?

"Oracle Health has done several restructurings and has lost talent. . . . Trying to escalate tickets since Oracle Health took over has been a nightmare. I don't see the vendor being proactive about anything until we report it. . . . It seems like they have lost a lot of their skilled implementation resources. We have had to re-explain a lot of things, and they have made a lot of suggestions that haven't worked. Things have been difficult because of the talent that has been brought to the table. I expect more coming from Oracle Health." —CIO

Is RevElate capable of ending customers' decades-long revenue cycle challenges?

"RevElate is really just the old Soarian Financials model. I am unsure how that will translate into a better revenue cycle. I am going forward with it because Cerner Patient Accounting is a jumbled mess. . . . Going to RevElate is my opportunity to start fresh and fix what we need to, but I am not sold on it. I don't know how things are going to work or whether RevElate is a better platform. I am not confident that RevElate is the answer I am looking for." —VP of revenue cycle

About This Report

This study is composed of findings gathered from seven rounds of interviews with a longitudinal feedback group, which has included 43 Oracle Health customer organizations (some have left the vendor since the first round). Interviews were conducted at various times from 2022 to 2025. This report—which primarily focuses on insights from the 2025 interviews—shares customers' perceptions of Oracle Health and their experiences with various company changes and announcements since 2021. To gather these perspectives, KLAS used a **supplemental evaluation** to interview leaders from participating customer organizations. Although KLAS made every effort to interview the same organizations across all rounds of interviews, organizations that have moved or are moving to another EHR are no longer included; additionally, the number of respondents across rounds sometimes varied.

Respondents were asked the following questions:

1. Do you see Oracle Health as a long-term partner?
2. On a 1-9 scale, rate your confidence in Oracle Health's overall vision of the future.
3. How satisfied are you with Oracle Health's current execution/delivery?
4. How has your satisfaction with Oracle Health's execution/delivery changed over the past 6 months?

5. What are your adoption plans for the following solutions? If already live, how would you rate your satisfaction on a 1–9 scale? How confident are you that Oracle Health’s delivery of these solutions will have a positive impact on your organization?
- | | | |
|----------------------|--------------------------------------|-----------------------------|
| a. Clinical AI Agent | c. Oracle Cloud Infrastructure (OCI) | e. Patient Portal (Updated) |
| b. EHR (Updated) | d. Patient Accounting (RevElate) | f. Seamless Exchange |

This report also draws on insights from other KLAS research, including [KLAS ongoing data for Oracle Health](#) and [US Acute Care EHR Market Share 2025 report](#).

Sample Sizes

Unless otherwise noted, sample sizes displayed throughout this report (e.g., n=16) represent the total number of *unique customer organizations* interviewed for a given vendor or solution. However, it should be noted that to allow for the representation of differing perspectives within any one customer organization, samples may include surveys from different individuals at the same organization.

Some respondents choose not to answer particular questions, meaning the sample size for any given vendor or solution can change from question to question. When the number of *unique organization* responses for a particular question is less than 15, the score for that question is marked with an asterisk (*) or otherwise designated as “limited data.” If the sample size is less than 6, no score is shown. Note that when a vendor has a low number of reporting sites, the possibility exists for KLAS scores to change significantly as new surveys are collected.

Reader Responsibility

KLAS data and reports are a compilation of research gathered from websites, healthcare industry reports, interviews with healthcare, payer, and employer organization executives and managers, and interviews with vendor and consultant organizations. Data gathered from these sources includes strong opinions (which should not be interpreted as actual facts) reflecting the emotion of exceptional success and, at times, failure. The information is intended solely as a catalyst for a more meaningful and effective investigation on your organization’s part and is not intended, nor should it be used, to replace your organization’s due diligence.

KLAS data and reports represent the combined candid opinions of actual people from healthcare, payer, and employer organizations regarding how their vendors, products, and/or services perform against their organization’s objectives and expectations. The findings presented are not meant to be conclusive data for an entire client base. Significant variables—including a respondent’s role within their organization as well as the organization’s type (rural, teaching, specialty, etc.), size, objectives, depth/breadth of software use, software version, and system infrastructure/network—impact opinions and preclude an exact apples-to-apples comparison or a finely tuned statistical analysis.

KLAS makes significant effort to identify all organizations within a vendor’s customer base so that KLAS scores are based on a representative random sample. However, since not all vendors share complete customer lists and some customers decline to participate, KLAS cannot claim a random representative sample for each solution. Therefore, while KLAS scores should be interpreted as KLAS’ best effort to quantify the customer experience for each solution measured, they may contain both quantifiable and unidentifiable variation.

We encourage our clients, friends, and partners using KLAS research data to take into account these variables as they include KLAS data with their own due diligence. For frequently asked questions about KLAS methodology, please refer to engage.klasresearch.com/why-klas.

Copyright Infringement Warning

This report and its contents are copyright-protected works and are intended solely for your organization. Any other organization, consultant, investment company, or vendor enabling or obtaining unauthorized access to this report will be liable for all damages associated with copyright infringement, which may include the full price of the report and/or attorney fees. For information regarding your specific obligations, please refer to engage.klasresearch.com/data-use-policy.

Note

Performance scores may change significantly when additional organizations are interviewed, especially when the existing sample size is limited, as in an emerging market with a small number of live clients.
